

## **National Database for the Mayo-Portland Adaptability Inventory (MPAI-4) available soon**

### **Volunteer sites needed for Phase II trial**

ClientInfo for the MPAI-4 is a web-based database system that provides:

- User-friendly secure data entry of patient/client demographics, rehabilitation data, and MPAI-4 results for post-acute brain injury rehabilitation programs.
- Easy access to individual patient/client records to evaluate change over the course of post-acute rehabilitation.
- Summary reports to evaluate outcomes for patient/client groups in the same or similar programs at your facility.
- Comparison reports for anonymous HIPAA compliant comparison of facility and program outcomes with those of other facilities and programs in the United States serving similar patient/client groups.

The ClientInfo system has been recently enhanced with Phase I funding from the National Institute for Neurologic Disease and Stroke (NINDS) and the technical expertise of Inventive Software Solutions and the Oregon Research Institute. In Phase I, usability and functionality of the ClientInfo system was demonstrated in a small sample of users.

We are applying for Phase II funding to test ClientInfo with a much larger group of users and facilities. We are looking for facilities in which 6 to 10 users from various backgrounds (data entry, clinical, administrative) can test the system and provide feedback. If your facility is interested in being a test site for the Phase II project, please return the e-mail below indicating your interest.

Benefits of volunteering include:

- Being in on the ground floor of the only national, multi-site database system for evaluating post-acute brain injury rehabilitation
- Providing input to refine the system in ways that work for your facility
- Discounted initial rate for subscription to the system when it is commercially available

An indication of interest does not imply a contractual obligation and your facility may withdraw from the project at any time. For practical reasons, participation in Phase II must be limited to U.S. facilities. However, if you are in another country and have interest in ClientInfo, please let us know by e-mail. We intend to extend this program outside the United States in the future.

**Participating centers will be selected on a first-come, first-serve basis by geographic region so if you have interest, sign up soon!**

Thanks and Good Wishes,

Dr. Jim Malec

Dear Dr. Malec:

We have great interest in the ClientInfo system for the Mayo-Portland Adaptability Inventory (MPAI-4) and in being a test site for Phase II development of this secure web-based system for evaluating patient/client outcomes of post-acute brain injury rehabilitation. Since ClientInfo is the only national, multi-site database system for evaluating post-acute brain injury rehabilitation, we are delighted to have the opportunity to help refine the system and to be in on the ground floor of this exciting project.

We are able to provide 6 to 10 users at our facility from various backgrounds (data entry, clinical, and administrative) to evaluate the system and provide feedback. We understand that an indication of interest does not imply a contractual obligation and we may withdraw from the project at any time.

Nonetheless, we are very interested in being a part of this groundbreaking project. We also appreciate that we will receive a discounted initial rate for subscription to the system when it is commercially available.

So please add our facility to the list of potential Phase II Test Sites. Our contact information is as follows:
